

Real-World examples of GCS equipment in the field

Annapolis, MD. January 16, 2019 A joint communications team from the Maryland Army and Air National Guard set up a Hawkeye III Lite VSAT for satellite reach back in the snow outside the Maryland Statehouse. The Hawkeye III Lite provided data access to the Inauguration Event Command Center for the Inauguration of Maryland Governor Larry Hogan held on January 21st. “Set up was simple and connectivity was seamless with good data rates,” said LTC William Petry, Communications Director for the event. “The joint team had never used this system before and had only one hour of instruction on setting up, which proves how simple and easy to use the Hawkeye III Lite is”. This system supported an event command center of 17 personnel overseeing the event, law enforcement, medical, transportation, and consequence management.
