The Hawkeye III Lite is a lightweight, auto-acquisition VSAT that delivers high-speed data communications for Internet, VPN and video transmission.

The Hawkeye III Lite is designed for modem and RF modularity. Ancillary kits allow users to quickly change between frequency bands and modems in minutes. Support for external modems is also available through the front panel of our Enhanced Outdoor Unit (EODU).

Our Viewsat-E GUI automates configuration when swapping frequency bands or modems and allows commonality of control.

Subsystem monitoring and troubleshooting is simplified by unifying all status reporting into a single, easy-to-read display.

The modular design of the Hawkeye III Lite VSAT allows the system to be configured to adapt to varying missions. The operator can easily change RF bands with the simple swap out of a RF Band kit versus an entire system, greatly reducing setup time and cost. To enable access to global networks, this system is offered with a number of embedded modem options. The Hawkeye III Lite integrates an elegant and simple user interface via its web-based ViewSat™-e GUI, which provides easy, accurate, and quick acquisition without the need for complex test equipment. One-button satellite auto-acquisition helps improve performance in disadvantaged coverage areas, greatly reduces setup time, and allows the user to close larger data links and "lock-on" in a matter of minutes.
